Gingivectomy is a dental procedure in which a dentist or oral surgeon cuts away part of the gums in the mouth (the gingiva).. It is the oldest surgical approach in periodontal therapy and is usually done for improvement of aesthetics or prognosis of teeth. It is referred to as a crown lengthening procedure.. By removing the pocket wall, gingivectomy provides visibility and accessibility for ...

Periodontal disease can likewise lead to poorer diabetes outcomes. Presence of pathogenic bacteria in the mouth with diseased gums leads to septicemia, increasing inflammatory processes throughout the body and worsening glycemic control.

Improving Preventive Oral Care to Enhance Overall Health

Dental attrition is a type of tooth wear caused by tooth-to-tooth contact, resulting in loss of tooth tissue, usually starting at the incisal or occlusal surfaces. Tooth wear is a physiological process and is commonly seen as a normal part of aging. Advanced and excessive wear and tooth surface loss can be defined as pathological in nature, requiring intervention by a dental practitioner.

In order to produce a ZrO₂ core for a prosthetic restoration, it is necessary to use a computer-aided design/manufacturing (CAD/CAM) system that can deal with zirconia and create a fitting framework. The realization of the ZR-ceramic restorations must be conducted in a precise sequence of steps that involves both the clinician and the laboratory technician.

An overview of zirconia ceramics: Basic properties and

Abstract: Background: The Rural population makes 90 percent of India. Previously their access to modern methods of surgical treatment was limited. Now with wider skill set and training in rural surgeons, total knee arthroplasty has become a regular feature of treatment in rural population, although patterns of osteoarthritis in India mainly involve the medial compartment.
