In computer science, a high-level programming language is a programming language with strong abstraction from the details of the computer. In contrast to low-level programming languages, it may use natural language elements, be easier to use, or may automate (or even hide entirely) significant areas of computing systems (e.g. memory management), making the process of developing a program ...

High-level programming language - Wikipedia

The regex matches the first field, second field and the rest, however groups the 2nd field alone. The whole line is now replaced with the 2nd field(1), hence only the 2nd field gets displayed.

bPopup is a lightweight jQuery modal popup plugin. It's a flexible open source responsive lightbox popup plugin with focus on performance and features.

bPopup.js – A jQuery popup plugin | dinbror

History. Eclipse was inspired by the Smalltalk-based VisualAge family of integrated development environment (IDE) products. Although fairly successful, a major drawback of the VisualAge products was that developed code was not in a component-based software engineering model. Instead, all code for a project was held in a compressed lump (somewhat like a zip file but in a proprietary format ...
